roshanbtech2023@gmail.com | +91 7548845037 | Hosur LinkedIn↗

CAREER OBJECTIVE

B.Tech IT student specializing in Data Analytics with internship experience in data analysis and data science. Skilled in Python, SQL, Pandas, NumPy, EDA, Tableau, and machine learning. Seeking to apply my skills to real-world projects and strengthen my expertise in data science.

WORK EXPERIENCE

Data Analytics Intern • Internship Jun 2026 - Sep 2026
Airkrit India, Virtual

- Worked on live projects involving data analysis and analytical problem-solving.
- Applied data analysis techniques to explore datasets and identify meaningful patterns.
- Strengthened analytical thinking and practical problem-solving skills through project-based work.

Data Science Intern • Internship Dec 2025 - Mar 2026
White And Box-tech Products And Services, Virtual

- Cleaned and preprocessed datasets using Python, Pandas, and NumPy.
- Performed exploratory data analysis (EDA) to identify trends, patterns, and insights.
- Handled missing values, duplicate records, and data transformation tasks to improve data quality.
- Created interactive Tableau dashboards and visual reports to communicate analytical findings.

EDUCATION

B.Tech, 2023 - 2027
Alliance University

PORTFOLIO

Leetcode link ↗

PROJECTS

Skin Lesion Detection using Deep Learning| TensorFlow, CNN ↗
Jan 2026 - Apr 2026

Built end-to-end AI pipeline from raw image diagnosis report Enabled 3D lesion visualization, improving interpretability Combined deep learning + classical CV techniques for robustness and designed real-time interactive web interface. Implemented explainable AI (Grad-CAM) for trust in predictions

Offline-Voice-Recoganization ↗
Nov 2025

Developed an offline AI-powered voice keyboard system that converts speech into text and corrects grammatical errors without requiring an internet connection. Integrated Vosk for real-time speech recognition and LanguageTool for grammar correction. Designed an interactive desktop interface using PyQt5 and implemented system-wide text insertion using Linux automation tools.

AI-Powered Driver Safety System Using Smartwatch
Dec 2025 - Mar 2026

Developed a machine-learning-based driver safety system that detects potential driver distress using sensor data. Integrated GPS and Bluetooth Low Energy (BLE) for location tracking, communication, and real-time alerts. Designed a low-latency edge-inference workflow and implemented an automated emergency alert mechanism to support timely responses to potential safety incidents.

SKILLS

- Python
- NumPy
- Data Preprocessing
- Tableau
- Git
- Docker
- SQL
- Data Analysis
- scikit-learn
- Matplotlib
- Flask
- Pandas
- Data Cleaning
- Deep Learning
- Data Visualization
- FastAPI

EXTRA CURRICULAR ACTIVITIES

- Participated in PRAKALP 2025 Science Expo, exploring technical innovation and project development.

ADDITIONAL DETAILS

- Won 1st Place in Paper Presentation at Techfinix, Paavai Engineering College. Won Best Paper Presentation at the NCSS AI'26 Conference. Won Best Use of Open Source at a national-level hackathon hosted by REVA University.
